

GO2cam v6.04

Our R&D team at GO2cam International is always striving to improve our CAM solutions for workshops.

The result? A software that is as user-friendly as possible, an optimal working tool for programmers, CNC machine operators and mechanical engineers alike.

We are happy to present you the novelties in this v6.04 today and we hope you will like them.

Release date: March 1st, 2017

GRAPHIC USER INTERFACE

Novelties include interactive status bar, new dynamic system of axis, contextual popup menus, new direct access to the dialogue of filters, users view ...

AUTOMATIC SOLID IMPORT

New multiple import and creation of stock during import for GO2cam Milling

Implementation of automatic solid import into wire-cut EDM

SOLID MANAGEMENT

Persistence of solids, new graphics for the solid rendering

WIRE-CUT EDM

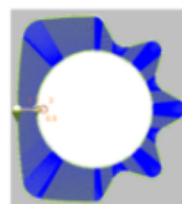

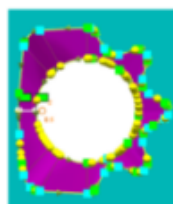

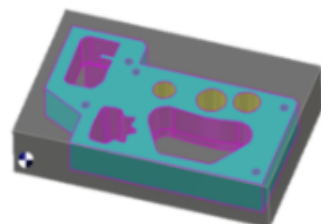

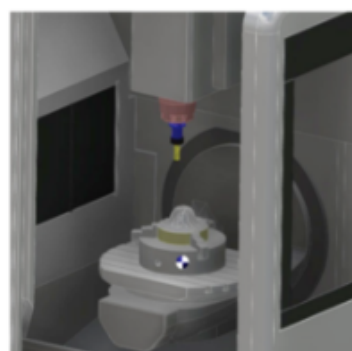

Selection of solid faces, link between solid profiles and threading, easy management of 4 axis shape, among others

Management of Threading Die and new Conic Pocketting cycle

LINK TO VERICUT

VERICUT

... and 40+ other improvements in Design, Milling and Turning
