

SUCCESS STORY

The University of Aberdeen Dental School is based in a purpose built new facility which was opened in January 2010. It offers the first graduate entry BDS programme in Scotland. Our Dental School is located on the Foresterhill site alongside two other dental facilities: the Aberdeen Dental Education Centre, a postgraduate dental training centre with associated outreach clinics and Argyll House, which hosts a series of dental surgeries for NHS Grampian's salaried dental service.

The software was purchased to support a teaching programme for trainee dental technologists.

The Programme is delivered by the University of the Highlands and Islands and successful candidates qualify with a Higher Education Diploma. This then allows the technician to apply to the General Dental Council to register as a qualified technician.

GO2dental, a straightforward and easy-to-use solution

“The large, well-known companies offering dental CAM seem to offer packaged systems. We liked the customized solution of GO2cam International and saw the development link with C4W, so we decided to purchase.”

Keith Ewan, NHS Dental Laboratory Manager

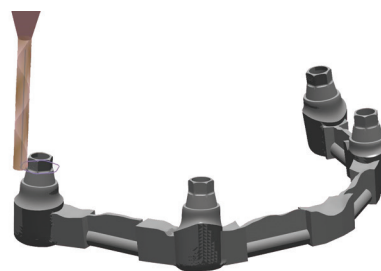

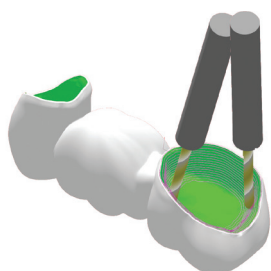

“Being new to CAD/CAM, we had the CAD software but then realised there was no CAM software within the products we had purchased. We then conducted some research on the Internet.”

GO2dental is based on a proven technology developed for the mechanical industry for over 25 years. The machining with GO2dental is optimized to reduce manufacturing times and increase tool life. Keith Ewan continued “The product appeared to be very straightforward and easy-to-use. This would be attractive to students.”

GO2dental, a comprehensive solution

NHS grampian is looking to use the software to machine full crowns, inlays, onlay, veneers, telescopic crowns, press ceramic and partial denture frameworks.

Materials will consist of Wax, PMMA, Zirconia and 3M Lava Ultimate nano composite resin.

“ We would like to thank GO2cam International team and we look forward to their product in the future as it combines well with our own system combinations (Map 400, DWX-50 and Digistell). ”
