# FULLY AUTOMATIZED PROCESS

GO2dental brings automatization to the next level.

Whether for discs or pins, GO2dental brings automatization to the next level and lets dental technicians focus on their value added job.

Thanks to this fully automatized process :

USER

GO2DENTAL

MACHINE

1.
The user
selects
several STL files
and the stock

2.
GO2dental
does the rest :
- it places elements
in the discs or pins,
- it puts the sprues (connectors),
- it calculates the toolpaths.

3.
NC File is then ready
to be run
on **the machine**

IMPLANT INTERFACE

GO2dental enables the user to create his data base with his dimensions, via full parametric models. It then becomes easier and faster to create and replace interfaces.

MARGIN LINE EDITION

The new edit mode of the margin line is so easy-to-use and simple that it requires only a few seconds to edit the margin line.

BETTER MANAGEMENT OF USED DISCS

GO2dental enables to register used discs in order to machine the material left, for a better management of stocks and cost savings.

64bits AND MULTITHREADING

GO2dental is now 64 bits and includes multithreading technology which reduces the calculation time.
